Cloud & Data Engineer who designs end-to-end serverless data platforms. I turn messy, manual processes into cloud systems that run themselves. Currently processing 25M+ records in production (growing ~2M/month) on ~\$0 infrastructure. On the path to Cloud Solutions Architect.

FEATURED PROJECTS

DataForge Cloud — *Serverless analytics platform*

How I automate it:

- Incremental ingestion: only reprocesses files that changed (catalog-based).
- Auto-publishes the result to Cloudflare R2 (object storage).
- Serverless dashboard: queries data directly in the browser (DuckDB-WASM).
- Orchestrated 3x/day (Task Scheduler + GitHub Actions) with failure isolation.

Stack: Python · DuckDB · Parquet · Cloudflare R2/Pages · React · DuckDB-WASM · GitHub Actions

Impact: Self-updating analytics, no server to maintain, ~\$0 infrastructure cost.

DataForge — *ETL pipeline + analytical warehouse*

How I automate it:

- Layered architecture (readers -> transforms -> writers), easy to maintain.
- Incremental deduplication and consolidation into columnar Parquet.
- DuckDB views ready to query; reprocesses only what changed.

Stack: Python · Pandas · DuckDB · Parquet

Impact: 25M+ records; package-level reconciliation across 5 sources; runs unattended 3x/day.

Logistics Portal Automation (RPA) — *Playwright bot*

How I automate it:

- The bot logs in and matches records by business rules.
- Uploads and downloads documents to the portal with no human intervention.
- Confirms success by the network response, not by assumption.

Stack: Python · Playwright

Impact: Eliminates repetitive manual portal work and reduces errors.

UGPP Shield Pro — *Cloud web app for finance leaders (CFOs)*

How I automate it:

- Automated fiscal / compliance calculations and validations.
- Serverless deployment on Cloudflare Pages, no servers to manage.

Stack: JavaScript · Vite · Cloudflare Pages

Impact: Decision and fiscal-intelligence tool for leadership.

SKILLS

Cloud & DevOps: Cloudflare (R2, Pages, Workers) · Serverless · GitHub Actions (CI/CD) · Git · AWS (in progress)

Data Engineering: ETL · Incremental ingestion · Parquet · DuckDB · Data Warehousing · Dimensional Modeling

Languages & BI: Python (Pandas) · SQL · Power BI · React + DuckDB-WASM

AI & Automation: LLM integration · Prompt engineering · Playwright (RPA) · Power Automate

CERTIFICATIONS & EDUCATION

Certifications: AWS Cloud Practitioner Essentials (Jun 2026) · Python 0-2 Code Avengers · AWS CLF-C02 (in preparation)

Education: Systems Engineering (in progress) - Corporacion Universitaria Americana · Software Development Technician - Fundetec
